Department: Family Medicine (Case Report)

Case Report

Primary hyperparathyroidism in a patient with a history of

hypertension, hyperlipidemia, and type 2 diabetes

OBJECTIVE: To report a case of primary hyperparathyroidism in a patient with a history of hypertension, hyperlipidemia, and type 2 diabetes.

SETTING: Family Medicine (Case Report)

CONCLUSION: Primary hyperparathyroidism

is a common cause of hypertension, hyperlipidemia, and type 2 diabetes. It should be considered in patients with these conditions.

KEY WORDS: Case report; hypertension; hyperlipidemia; type 2 diabetes.

INTRODUCTION: Primary hyperparathyroidism is a common endocrine disorder that is often undiagnosed. It is characterized by hypercalcemia and elevated parathyroid hormone (PTH) levels.

It is a common cause of hypertension, hyperlipidemia, and type 2 diabetes. It should be considered in patients with these conditions.
