

The following table shows the results of the experiment. The first column shows the number of trials, the second column shows the number of correct responses, and the third column shows the percentage of correct responses. The fourth column shows the standard deviation of the number of correct responses.

Number of trials	Number of correct responses	Percentage of correct responses	Standard deviation
10	7	70%	1.73
20	14	70%	1.73
30	21	70%	1.73
40	28	70%	1.73
50	35	70%	1.73
60	42	70%	1.73
70	49	70%	1.73
80	56	70%	1.73
90	63	70%	1.73
100	70	70%	1.73

The results of the experiment show that the percentage of correct responses is constant at 70% across all trial numbers. This suggests that the subjects are performing the task at a constant level of accuracy. The standard deviation of the number of correct responses is constant at 1.73 across all trial numbers. This suggests that the variability in the number of correct responses is constant across all trial numbers.

The following table shows the results of the experiment. The first column shows the number of trials, the second column shows the number of correct responses, and the third column shows the percentage of correct responses. The fourth column shows the standard deviation of the number of correct responses.
